SUMMARY

I have **two years** of expertise as a seasoned front-end developer, and I specialize in building solid applications that are specifically suited to **address corporate demands**. I am excellent at promoting **open communication**, **flexibility**, and **teamwork**, all of which are crucial for fruitful **partnerships and efficient problem-solving** among various teams. Beyond my work, I'm passionate about imparting my knowledge of software development trends, artificial intelligence, and tech tools to others in order to help them improve and learn on LinkedIn.

TECHNICAL SKILLS

Programming Languages: JavaScript, Python, C#, and TypeScript.
Databases: MySQL, MongoDB, and PostgreSQL.

Web Technologies: HTML, CSS, TailwindCSS, BootStrap, ReactJS, Redux, NextJS, and Typescript.

Tools: Babel**,** Git/Github, CI/CD, Figma, Jira, Npm, Postman, Staging, Linux, Nginx, and Webpack.

EXPERIENCE

Roovas (in development stage) | **Founding frontend developer (remote)** | https://rental-six.vercel.app/

April 2023 – October 2023

A rental solution company that connects homeowners and tenants in the property rental market streamlines the rental process for tenants and landlords for a clear, cheap, and stress-free experience.

- I developed the website entirely on my own from ground up and assured scalability through effective coding techniques, which helped the business attract a potential investor.
- I created and developed user-friendly interfaces for property owners to register and list their properties and for tenants to look up apartments and submit applications for the ones that interest them.
- I turned intricate Figma ideas into useful, responsive pages to produce user experiences that are simple to use and visually appealing.
- I utilized SEO best practices to raise the website's visibility and search engine rankings by using structured data, meta, semantic and descriptive tags.

PERSONAL PROJECT

AirBnB clone | https://github.com/festusasiyanbi/AirBnB_clone_v3

- I developed a fully functional AirBnb web application clone using Python, and MySQL, implementing features such as user authentication, property listing, booking management.
- I utilized Python Flask-SQLAlchemy for database ORM which made it easier for me to manipulate data

and ensure smooth interaction between the Python application and MySQL database.
- I implemented advanced search functionality with filter for locations, prices, availability, and amenities which enable users find suitable accommodation seamlessly.
- I developed a secured database using MySQL, optimizing efficient data storage and retrieval for property listings and user profiles.

WhatsApp Web clone | https://whatsapp-web-clone-dd630.web.app/

- I developed a WhatsApp web application clone with ReactJS and Firebase, incorporating Google Sign-In authentication to handle user authentication, guaranteeing a dependable, seamless, and intuitive login process and safe access to the application.
- I integrated Firebase to enable users send and receive messages in real-time, and also created a function that allows users send and receive up to ten photos in a message at a time, improving user experience by facilitating multi-media communication which gives users a smooth communication experience.

Ajaniti40 | NextJS & TypeScript | https://www.ajaniti40.com/

- I developed a birthday bash website with NextJS, TypeScript, Sanity, and Firebase, incorporating a google Sign-In authentication and sanity checks to ensure that the most crucial aspects of the website were working as expected.
